

■ Resume Score

****88/100**** – A strong, results-oriented technical resume. It effectively balances LLM expertise with core MLOps and engineering skills, though it could benefit from more detailed business-impact metrics.

■ Strengths

- ****Quantifiable Impact:**** Excellent use of metrics (e.g., "cutting resolution time by 45%", "99.9% uptime", "300+ GitHub stars").
- ****Modern Tech Stack:**** Clearly demonstrates proficiency in high-demand GenAI tools (RAG, LoRA, LangChain) alongside standard ML infrastructure (Kubernetes, MLflow).
- ****Comprehensive Structure:**** Clear separation of professional experience, projects, and technical skills allows for quick ATS parsing and recruiter readability.

■ Weaknesses

- ****Lack of "Leadership/Mentorship":**** At 3+ years, the resume is very execution-focused; highlighting any cross-functional leadership or technical mentorship would elevate it to a Senior level.
- ****Project Detail Overload:**** While the projects are impressive, the "Tech" lines under projects could be integrated into the bullet points to save space and demonstrate how the tech was utilized.

■ Missing Skills

- ****Distributed Computing:**** Experience with Apache Spark or Ray (for handling massive datasets).
- ****Advanced AI Safety/Governance:**** Knowledge of model bias mitigation, PII masking, or LLM guardrails (e.g., NeMo Guardrails, Guardrails AI).
- ****FinOps/Cost Optimization:**** Experience with managing/optimizing cloud inference costs (e.g., Spot instances, model distillation for cost).

■ Suggestions

- ****Add a "Leadership" section:**** Even if informal, highlight instances where you guided junior developers, conducted code reviews, or contributed to architectural decision-making.
- ****Include Model Governance:**** Add a bullet point regarding compliance, security, or data privacy (GDPR/SOC2) in your ML pipelines, as this is a major concern for enterprise AI hiring.
- ****Optimize Formatting:**** While standard, consider creating a slightly more visually distinct header to make the contact information pop.

■ Best Suitable Job Roles

- ****Senior Machine Learning Engineer****
- ****Generative AI Engineer****
- ****AI/MLOps Engineer****
